LEON GZ625
Pull Scraper

LEON GZ625 Offers Maximum Scraping Ability

Yorkton, SK – July 29, 2021 – Tough construction and innovative design, that's what you get with the LEON GZ625 Pull Scraper. Our largest pull scraper, this model has enough capability to handle whatever you throw at it. The GZ625 is an essential tool for leveling fields, landscaping, road building, irrigation, snow removal, brush clearing and more.

This fully eight-way hydraulic scraper, designed for tractors rated up to 625++ hp, has the right features for the job. The LEON exclusive arched boom offers a mix of optimum visibility and maximum maneuverability. Eight-way adjustments allow for hydraulic lift and digging, hydraulic left and right angling, hydraulic left and right tilt and manual or hydraulic left and right offset. That offset can be up to 10' either side, helping you adapt to different terrain. The LEON exclusive ripple-formed moldboard keeps the load moving, and standard weight boxes and optional weights allow you to smooth out the ride.

Available options make the machine even more versatile. Swing-away side plates allow quick conversion into a box scraper. Blade widths in 18 ft., 20 ft. and 22 ft. are available to fit your needs. A wide range of hitches are available to adapt to any tractor. Laser leveling accessories mean you can level fields with complete accuracy to improve crop yield. Custom colour packages will match your GZ625 to any tractor for a dash of style.

To keep your land on the level, the LEON GZ625 is essential.
